DETAILED ACTION

Allowable Subject Matter

Claims 1-4 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or teach a multiphase linear motor with magnets side by side with multiple phase coils in which alternating currents are made to flow, where the interaction between the magnets and coils causes a linear displacement of the magnets, characterized in that the phase coils lie on an axis perpendicular to the direction of motion of the magnets as recited in claims 1 and 4.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Conrad 4,607,197 A discloses a combination linear/rotary motor with magnets side by side with coils, said coils lying in an axis perpendicular as well as in an axis parallel to the direction of motion of the magnets. Conrad does not disclose multiphase power for the motor. Goldie et al. 5,495,131 A discloses either a multiphase rotary or a multiphase linear motor in which the coils are either parallel or perpendicular to the longitudinal axis of the motor. In the linear motor embodiment of Goldie et al., the coils are parallel to the direction of motion of the magnets. No reason has been found for combining the multiphase power supply of Goldie et al. with the linear/rotary motor of Conrad. Even if such a combination were made, the multiple phase coils that cause relative linear displacement of the magnets would not be the coils lying on an axis perpendicular to the direction of motion of the magnets. In Conrad, the coils perpendicular to the longitudinal axis of the motor are for rotary movement of the magnets.
